What to know before you start

Third-Party Integration Partner

ScribbleVet works with Bitwerx, a third-party provider, to facilitate the connection between your PIMS and ScribbleVet account.

Data Sharing

Your practice data will be shared with Bitwerx to enable the integration. Only the data necessary to maintain the connection and sync information between your PIMS and ScribbleVet will be shared.

Integration Fee

Upon completion of setup, a **\$50 per practice per month integration fee** will be added to your ScribbleVet subscription. This fee is a pass-through cost for maintaining the integration with your PIMS and may be billed as a separate invoice. Billing begins once your integration is configured and active.

Integration setup requirements

Permission requirements:

- You must be a ScribbleVet account owner or admin to request this integration
 - To check your permissions, go to ScribbleVet Settings > Practice
- We will need to work with someone who has administrative access to your PIMS server. This may be you or a member of your IT team.

System requirements:

Your **PIMS** must be running one of the following versions:

- Avimark v2016.4.2 or later
- Cornerstone v8.3.6 or later
- Impromed v6 or later

Your **ScribbleVet account** must have:

- An active subscription
 - All team members in the same ScribbleVet practice workspace
-

Setup process

Setup may take 1-2 weeks and requires coordination with your clinic, ScribbleVet, and Bitwerx.

Step 1: Complete the setup form

Provide general clinic information and an IT point of contact with admin access to your PIMS.

Step 2: Integration installation

Bitwerx will contact you or your IT point of contact to install the connection on your PIMS server (if not already installed).

Step 3: ScribbleVet account configuration

The ScribbleVet team will configure the connection between your PIMS and ScribbleVet account. If applicable, this will require individual ScribbleVet accounts to be consolidated under the same practice workspace.

Setup complete

Once all steps are finished, the ScribbleVet team will notify you and billing for the integration fee will begin.

Integration permissions

ScribbleVet Account Owners/Admins

- Can pull appointments for the entire team
- Can push notes back to the PIMS for all linked providers
- Can edit provider links in Settings > Integrations

Individual ScribbleVet users

- **Pull appointments:** If they are assigned the provider on an appointment in the PIMS, they can pull it into ScribbleVet
- **Push notes:** If they are listed as the provider on an appointment in ScribbleVet, they can push the Scribbled note back to the corresponding appointment in the PIMS

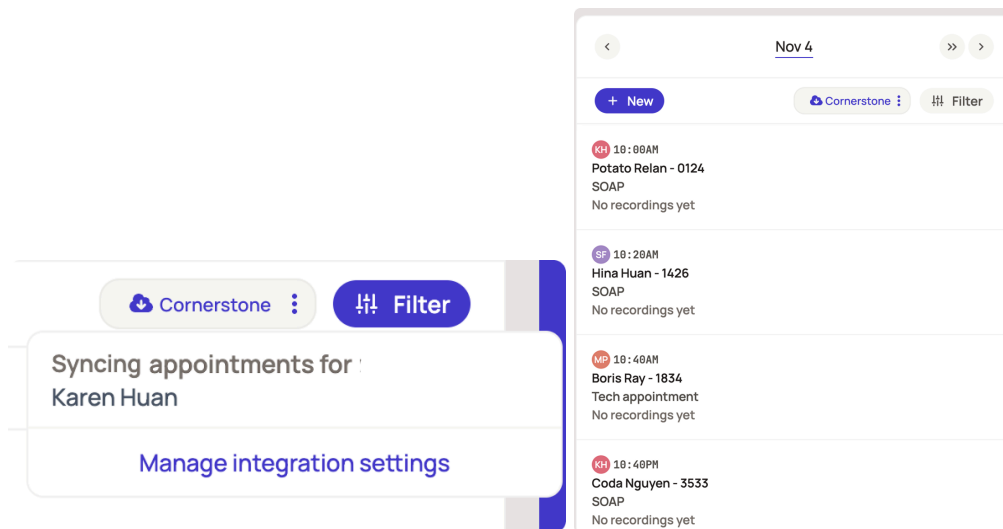

Linking your providers

1. Go to **Settings > Integrations > [PIMS Name]** and click "**Manage Integration**"
2. For each ScribbleVet user on the left, select the appropriate matching provider from the dropdown on the right
 - The left side lists ScribbleVet accounts in your practice
 - The right side is a dropdown of providers as configured in your PIMS server
3. **Note:** Linking providers helps automatically assign the pulled appointments to the corresponding ScribbleVet user. All appointments can be pulled in regardless of linking status.

Using the integration

Pull appointments from your PIMS

- Click the "[PIMS Name]" button at the top of your appointment list to pull appointments into ScribbleVet

Write notes back to your PIMS

- **Important:** You can only write back appointments that were originally pulled from your PIMS
- A "[PIMS Name]" button will appear at the top of your Scribbled note
- **Avimark** - you will be able to map ScribbleVet SOAP sections to the corresponding vilmark SOAP sections. This creates a new MCR in the patient record and users have the option to push notes as unfinalized or finalized.
- **Cornerstone** - you will be able to select specific ScribbleVet SOAP sections, which are combined into a single document. This creates a new document in the patient record and users have the option to push notes as unfinalized or finalized.

Sync to Cornerstone

Select sections to sync.
Syncing will create a new note in Cornerstone.
